

Treat-Eezi® Pressure Sore Prevention Overlays

Proven to assist in the healing of stage 2, 3 & 4 open wounds within 4 weeks during several clinical trials!

Treat-Eezi® technology envelops the contact area and distributes pressure evenly. When the body moves the air fibres surrounding the tissue maintain contact but glide on the under sheet virtually eliminating shearing, the major factor in tissue breakdown.

Using the Unique Patent Pending Quadruple layer of fine Polyester Fibres the Treat-Eezi® naturally and gently moves with the patient creating an almost ZERO chafing area allowing the patient a silent, comfortable sleep along with the assurance any ulcers present are given the best possible chance to breathe and heal.

Available with or without a Vapour Permeable Cover.

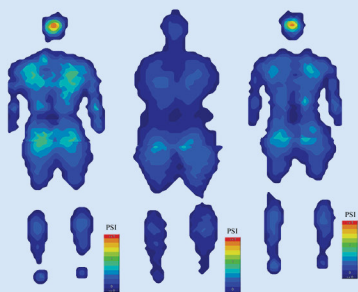

Unique Patent Pending Quadruple layer of fine Polyester Fibres

- Requires no electricity, no pumps or any maintenance contracts.
- Premium protection
- Reduces users temperature
- Lightweight, breathable & comfortable
- X-ray translucent
